REASON FOR ALLOWANCE

1. Kaji discloses a three piece wheel for a motor vehicle, said wheel comprising: an outer rim, an inner rim, and a disc, wherein a portion of said outer rim is abutted with said inner rim and compressed between said inner rim and said disc, and; first and second sets of through-holes defined respectively in said disc and said outer rim, said first and second sets of through-holes registered with each other, and registered with said first and second sets of through-bores, and, a plurality of fasteners for connecting said outer rim, said inner rim, and said disc to each other to define a wheel, said plurality of fasteners each comprising a portion that projects through an aligned pair of through-bores of said first and second sets of through-bores and into one of said threaded blind bores of said inner rim, wherein said outer rim is defined from a non-cast alloy plate material. Suzuki discloses a three piece wheel comprising a set of threaded blind bores defined in said inner rim for receiving a fastener for securing a disc provided between an inner and an outer rim. Hayashi discloses an automotive wheel of light alloy comprising first and second discs connected together by a threaded hole such that the axis of the connecting means is offset from the neutral axis of the wall of the rim. Thony discloses a three-piece steel wheel rim for vehicle tire comprising a center part, a front and a rear part connected to the front part. However, none of the references of record suggests a three piece wheel for motor vehicles wherein an outer rim is compressed between a disc and a surface of an inner rim such that the connecting means is inserted in the thickness of the wall of the groove of the inner rim and in that the axis of the connecting means is in proximity to or coincident with a neutral axis of

the wall of the groove of the inner rim in the manner defined in the instant claim 1.

Therefore, claims 2-6, depending therefrom, are considered to be allowable.
